t	Teleport (enter coordinates manually).
<b><i>Camera control</i></b>	
Left click + drag	Pan the camera.
Scroll wheel	Zoom in/out
<b><i>Mode options</i></b>	
m	Toggle <a href="#">rendering modes</a> .
h	Enable/disable the <a href="#">heightfield editor mode</a> .
Right click	Enable <a href="#">camera pan mode</a> .
SPACE	Toggle flying/walking modes.
TAB	Toggle turbo mode.
p	Pause / un-pause renderer.
<b><i>Rendering options</i></b>	
- / +	Decrease/increase max view distance.
9 / 0	Decrease/increase max ROAM triangles *.
[ / ]	Decrease/increase texture LOD bias.
\	Automatic texture LOD bias.
<b><i>Other</i></b>	
c	Save screen capture.
ESC	Close window.

## Camera pan mode

Same as default, except:

Control	Description
Mouse move	Pan the camera.
Right click	Disable camera pan mode.

## Editor mode

Same as default, except:

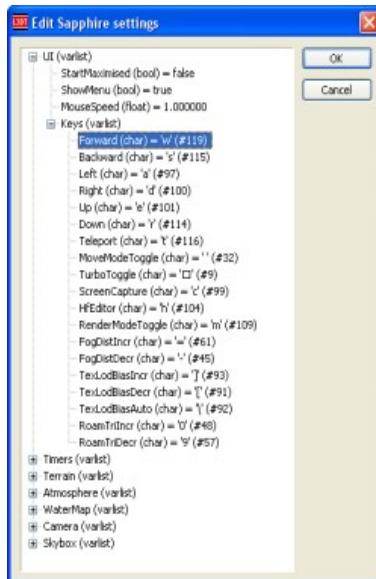

Control	Description
Left click + drag	Apply the selected brush tool.
Right click + drag	Pan the camera.
Scroll wheel	Increase/decrease brush size.

For a list of additional controls for brush tools, please consult the following pages:

- [Heightfield tools](#)
- [Attributes map brush](#)
- [Texture map map brush](#)

## Changing shortcut keys

To change the keys used for various tasks in *Sapphire*, open the renderer settings window ('Extensions→Sapphire→Renderer settings'), then navigate through the tree to 'UI→Keys'. You should see a list something like this:

To change a key value, double-click on the list entry, and press the key you wish to use (e.g. 'w'). For non-print characters such as the ESC key, you will instead need to enter '#' followed by the correct decimal ASCII code. For the list of ASCII codes, please consult [this helpful website](#).

## **Footnotes**

\* See [triangle count page](#) for effect of changing tricount.
